

Automatic communication change over indication Unit

Automatic communication change over (ACC) Indication Unit is a micro controller based Device which can indicate failure in any media of SSBPAC[D] Unit increase the availability of SSBPAC[D] by continuous monitoring the media channel

SALIENT FEATURES

Networking for ACC unit PFC'S are Provided for informing media availability and audio alarms SSBPAC[D] Message can be generated for user for any failure/restore of media in between supports up to 100 Mts distance in between SSBPAC[D] to audio visual alarm unit.audio Visualalarms for any failure of media in between SSBPAC[D]

Benfits of The System

Reduce time to repair by Providing root cause of media failure
Increase MTBF by identifying mediadeficiencies identifying the failure of the other end SSBPAC[D] equipment.
