

Point Machine Monitoring

- Predictive Maintenance System**
 - Predicts the failures much ahead by real time analysis of point machine voltages and currents, DC Track circuit
 - Improves MTTR and MTBF of system

Integrated Power Supply Monitoring

- Remote Condition Monitoring**
 - Provides remote condition monitoring of various power supplies with in railway yard
 - Identified faulty module in power distribution and informs the railway personnel

Battery Health Monitoring Unit

- Predictive Maintenance System**
 - Predicts the failures much ahead by real time analysis of battery parameters
 - Extends the battery bank life and guarantees backup

Signal Lamp Health Monitoring Unit

- Predictive Maintenance System**
 - Predicts the failures much ahead by real time analysis of signal lamp parameters
 - Improves MTTR and MTBF of system

Block Instruments

- SIL-4 Certified**
 - 2o/o3 Architecture
 - Complies to European CENELEC standards
 - First in INDIA to develop the product and get approval

AC Health Monitoring Unit

- Prescriptive Solution**
 - Better availability of air conditioning to ensure long life for temperature critical equipment

Control Centers

- S/Ws**
 - Failure Analysis System
 - Real-time simulation of yard
 - Predictive Maintenance of railway assets
 - MIS Reports
 - Network Management
